

3D Product Designer Extension for Magento2

Product Specification

The 3D Product Designer Module for Magento 2 allows merchants to showcase their products in a fully interactive 3D format, enhancing the shopping experience for customers. With this module, customers can rotate, zoom, and customize products by changing colours and adding text/images from every angle, providing them with a more detailed understanding of the product's features and design.

Features

Here is a comprehensive list of the features included in the 3D Product Designer extension:

- **Interactive 3D Viewer:** Display products in a dynamic 3D environment, allowing customers to rotate and zoom for a comprehensive view.
- **3D Customization:** Allow user to change colour and add text/image to products and view it in 3D.
- **Responsive Design:** The 3D viewer is optimized for various screen sizes and devices, ensuring a seamless experience across desktops, tablets, and smartphones.
- **Easy Integration:** Integrate the module seamlessly into your Magento 2 store with simple installation steps.
- **Cross-browser Compatibility:** Compatible with major web browsers, ensuring consistent performance and functionality for all users.
- **Product Type:** It works only with simple and configurable products.
- **File Type:** It works only with GLB and GLTF files (zip file not support).
- **Multistore:** It also works with the multistore view.
- **Scheduled Image Cleanup by Cron:** Ensures the automatic removal of saved customizable images in quote media folders after a designated period.

Admin Panel Configuration

Stores -> Configuration -> Pits Configuration -> 3D Product Designer

The screenshot shows the 'General Settings' section of the 3D Product Designer configuration. It includes the following settings:

- Enable** [store view]: A dropdown menu set to 'Yes'.
- Button label** [store view]: A text input field containing '3D View'.
- Edit Button label** [store view]: A text input field containing 'Customize'.
- Customization Button label** [store view]: A text input field containing 'Apply customization to Cart'.
- 3D View Background Color** [store view]: A color picker showing 'rgb(187, 187, 187)'.

Below the color picker, there is a note: 'Default Background color for 3D view in product detail page'.

Note: Price added is in base currency

Cron Settings

Admins can set up a scheduled task called a cron job to automatically clear out customization files stored in the **quote media** folders. This is particularly useful when customers save customized images without placing an order, preventing unnecessary storage consumption in the **pub/media** directory. It's a straightforward way for administrators to manage storage efficiently and keep the media storage area in Magento running smoothly. There are three fields under Cron Settings tab

Cron Settings

Clear Customisation Files
[website] Yes
Enable/disable cron to remove customisation files saved in quote media folder after a chosen period of time

Days after which files are to be deleted
[website] 30 Days
Automatically removes customisation files saved in quote media folder and order media folders after the selected days

Clear Quote Files
[website] Yes
Remove customisation files saved in quote media folder

Figure 5: Cron Settings

- **Clear Customisation Files:** Enable/disable cron to remove customization files saved in quote media folders after a particular period.
- **Days after which files are to be deleted:** If clear customization files field is enabled, the number of days can be selected after which files are to be deleted through cron job. Three options are set.
30 days, 60 days, 90 days
- **Clear Quote Files:** If clear customization files field and this field is enabled, admin can remove customization files in quote media folder.

How It Works in Backend

Administrators can set the font faces through the **Catalog menu** in the **admin panel** (Figure 6). Within this menu, a dedicated submenu for the Product Designer is available. This submenu includes distinct links for Font. When administrators select

the Font link, they are redirected to the Font Details page, where specific details and configurations related to fonts can be managed.

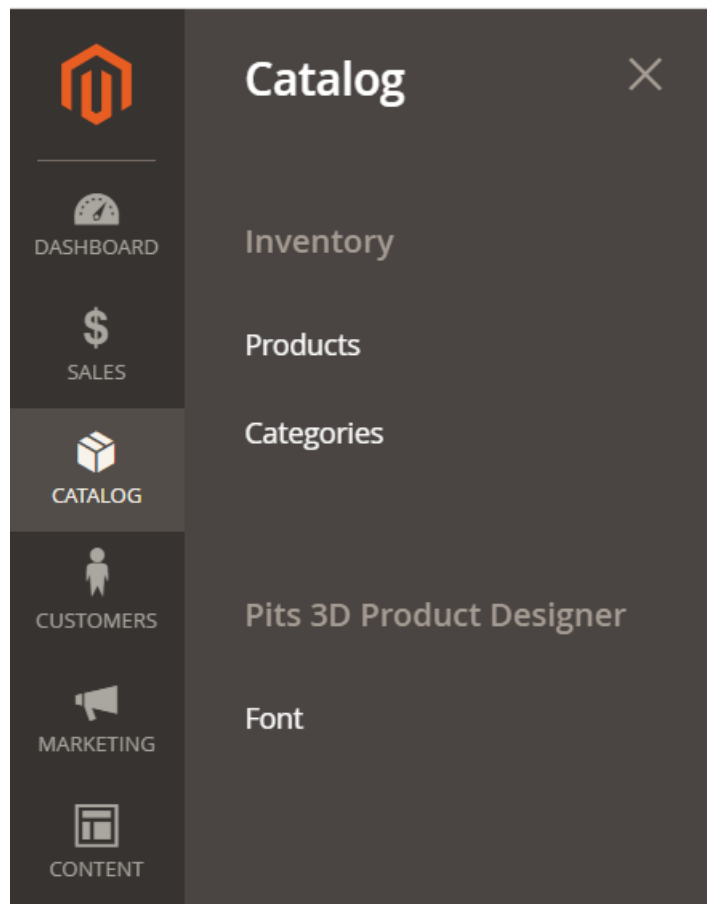

Figure 6: 3D Product Designer Menu for Font

Design Fonts

<input type="checkbox"/>	Font Name	Font File Path	Font Status	Action
<input type="checkbox"/>	BebasNeue-Regular	font/media/BebasNeue-Regular.ttf	Enabled	Edit
<input type="checkbox"/>	Lobster-Regular	font/media/Lobster-Regular.ttf	Enabled	Edit
<input type="checkbox"/>	LibreBarcode	font/media/LibreBarcode.ttf	Enabled	Edit
<input type="checkbox"/>	Lato-Regular	font/media/Lato-Regular.ttf	Enabled	Edit
<input type="checkbox"/>	Roboto-Regular	font/media/Roboto-Regular.ttf	Enabled	Edit

Figure 7: Design Fonts Page

The admin can see the added fonts in the page as shown in Figure 7. The font name and the file path of font face added, and the status of the font is shown. The action in Figure 7 can be set as Delete to multi delete the fonts. The admin can also edit the font by clicking the action 'Edit'. And selecting **"Add New Font"** above will redirect to an UI form which is for adding new fonts. The admin can set a new font by setting its name and its status, **upload a font file with supported font extensions of ttf, woff, woff2, otf** and saving the font by clicking **Save Font** (Figure 8). The **fonts with status enabled** are shown in frontend. If the fonts are not added or all fonts are disabled, **'Roboto Regular'** Font is set as default font on frontend.

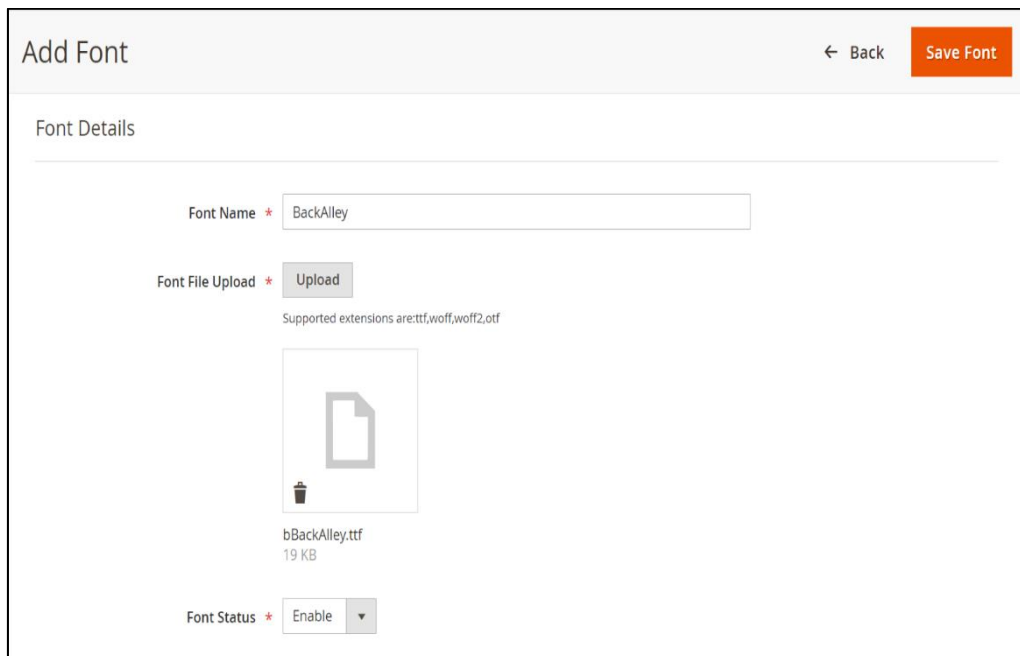

Figure 8: Add Font

Product Add/Edit Page

Administrators can add the 3D file in Product Add/Edit page. On this page, there exists a section named **'3D Product View.'** Within this section, there are following attributes:

- **Allow 3D Product View** - Enable product 3D view.
- **Allow 3D Product Design** - Enable product 3D design.
- **3D Graphic file** – To add product 3D file. Allow GLB or GLTF file type.
- **3D Image Background Colour** - To change the background colour of 3D view for a specific product.

3D Product View

Allow 3D Product View ☐ No

Allow 3D Product Design ☐ No

3D Graphic file No file chosen
Only support file GLB or GLTF. Make sure your file isn't more than 200M.

3D Image Background Colour

Actions

<input type="checkbox"/>	Mug_Q00123	Mug_Q001	Enabled	Disabled	Edit

Figure 10: Adding a 3D graphic file and saving

After adding a 3D graphic file and saving the product as shown in Figure 10, a grid displays the mesh layers of the 3D graphic file. Initially, the mesh layers in the 3D graphic file are listed within the grid with their color status and image layer status set to 'Disabled'. The admin can also set the color status of mesh layers by mass action.

Figure 11: Editing mesh details and setting mesh image layer status

By clicking on **'Edit'** in Action column, the administrators can set custom mesh label, mesh image layer status and mesh color status as shown in Figure 11.

The mesh color status denotes that customers can set color to only those mesh layers of 3D file which have its color status set as **'Enabled'**. The mesh image layer status denotes that customers can add image/text to only those mesh layer which have its mesh image layer status set as **'Enabled'**.

Note: Customers can add image/text to only one layer in 3D graphic file.

Note: By setting the mesh image layer status of a single mesh layer of 3D graphic file as **'Enabled'**. The mesh image layer status of other mesh layers is automatically assigned as **'Disabled'**.

Note: For configurable products, the administrator must follow a two-step process to enable 3D product design. Initially, the 3D product design feature needs to be enabled for the parent configurable product. Then, for each child simple product where customization is required, the administrator should individually enable the product design feature and add the 3D graphic file.

Product Design										
Video: Product Design Video										

Figure 12: Admin Sales Order View Page with Customization Details

After the placement of an order, all customization files, product design video, and uploaded images of the item are compiled and compressed into a zip file (Product Customisation Files). This zip file is then made accessible and viewable on the admin sales order view page (Figure 12). The administrators can view product design video to obtain better understanding to meet customers' requirements. The customisation price tab in items ordered section shows the price incurred for text, image and color addition.

How It Works in Frontend

When customers visit a product page with 3D file added, they will see a button (Figure 13). Clicking this button opens a popup (Figure 14) where customers can see the 3D product view. This button is triggered only when administrator set the '**Allow 3D Product View**' as 'Enabled' and a 3d graphic file is added in product edit page.

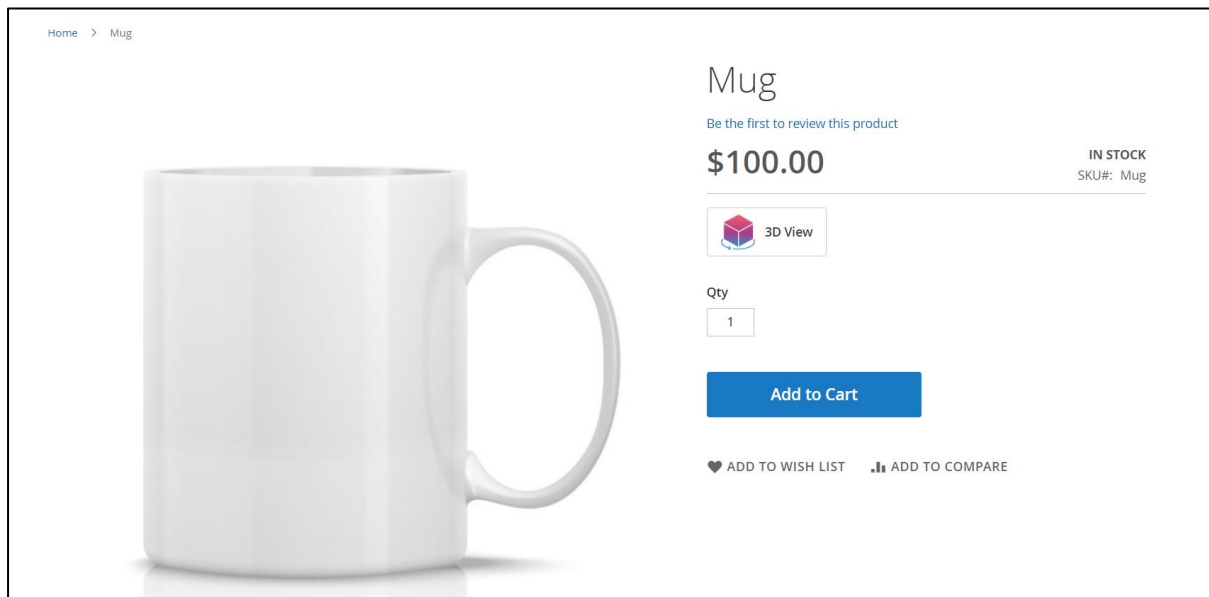

Figure 13: 3D Product View feature is enabled in the frontend

The popup contains a 'Design button' as shown in Figure 14 when administrator set the '**Allow 3D Product Design**' as 'Enabled' and either image or color status of any mesh layer is set as 'Enabled'.

Figure 14: Design button with label 'Customize' is shown

By clicking on 'Design' button, a popup appears which lists two tabs '**Color**' or '**Image/Text**' tabs. Color and image/text could be added in the mesh layers which have its color and image status enabled respectively in the backend.

Figure 15: 3D Design Popup

Figure 16: Customising mesh color

In Figure 16, customers can customise color of the mesh and can reset the mesh color back to default if it is to be changed.

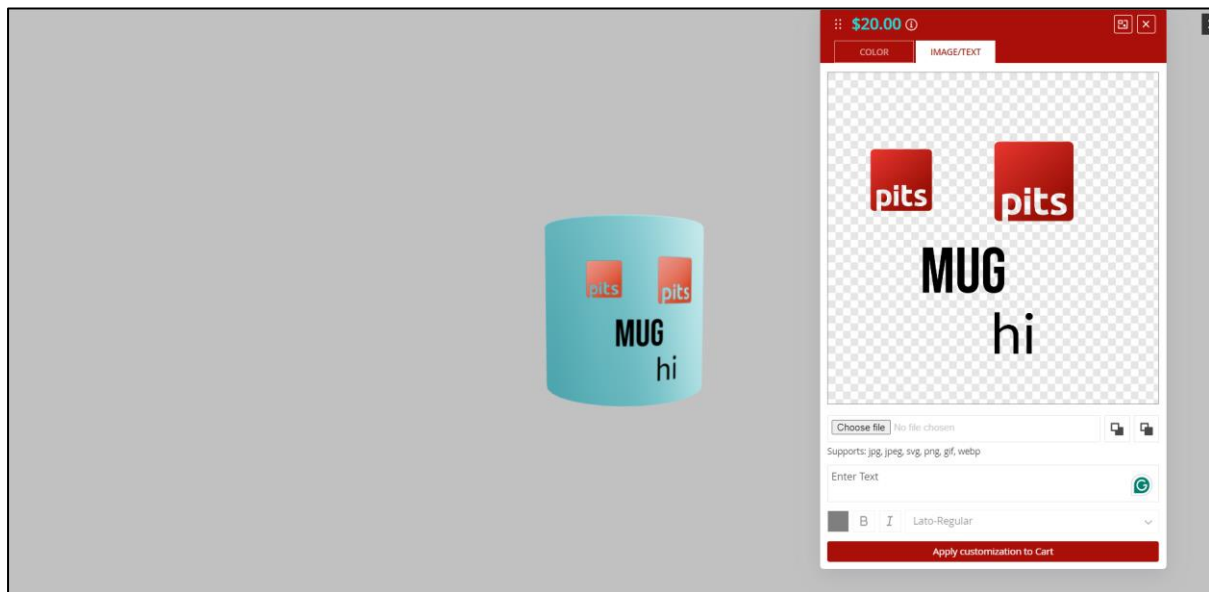

Figure 17: Customising product with adding text and image

Within the popup as shown in Figure 17, customers encounter a designated area where they can input their desired text and upload image. Customers can utilize the design fonts enabled in the backend for customization. This feature is accompanied by a range of customizable properties, allowing customers to fine-tune the appearance of the text to meet their preferences (Figure 17).

- **Font Selection:** Choose from a variety of fonts.
- **Color Specification:** Select the desired color for the text.
- **Font Style:** Bold, Italic

The window above the designated area is where uploaded image and added text appears in the mesh. The customers can move the elements anywhere within the mesh as per their discretion. It can also

- **Size Adjustment:** Customize the size of the text/image.
- **Element Rotation:** Rotate the text/image to achieve a preferred orientation.

Figure 18: Moving objects to top and bottom layers

The icons in Figure 18 helps in moving the objects to top and bottom layers.

The designing fee is an extra charge for customization, and its amount is based on how it is set up in the backend price settings. And it could be free or fixed pricing for color addition and it could be free or fixed pricing or pricing per object addition for both image/text addition.

Figure 19: Saving the customisation

By clicking on 'Save' button in popup, a customisation video is captured which spans the product in different directions. The customised image and video are downloaded to customer's downloads so it can be previewed before adding to cart.

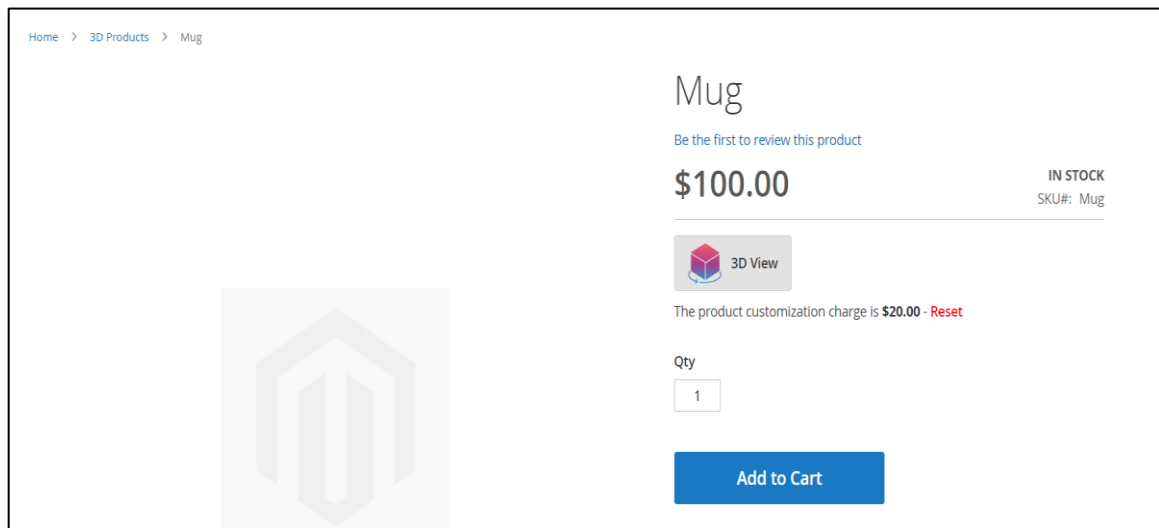

Figure 20: Customisation price is saved and Reset

Customers can reset the customisation after saving as shown in Figure 20 before adding to cart.

Note: Customers retain the flexibility to continue editing customised products until the final confirmation before adding to cart.

Minicart

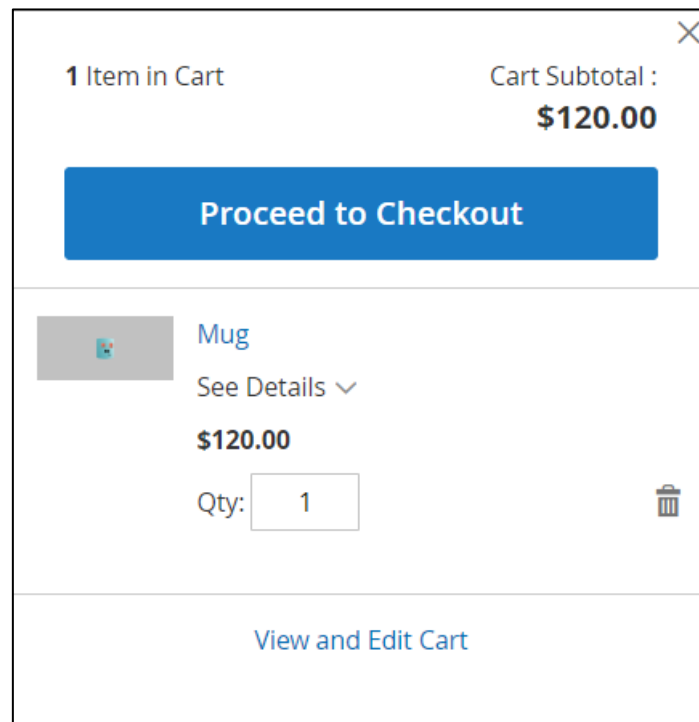

Figure 21: Minicart

Customized Product Images show the image customized and the product customization information section offers a detailed description of any modified text which is in **pdf format**, specifics about selected uploaded image in customized images (Figure 22). The price gets updated from \$100.00 to \$120.00 with the addition of design fee \$20.00. The minicart image has been changed to customized image (Figure 21).

Note: This extension supports only simple and configurable products and its child products. Also, please add the 3D file with coordinates set to (0,0,0) for a better view.

Note: Price added is in base currency in admin configuration

Limitation

- This extension supports only simple and configurable products and its child products (please add the 3D file with coordinates set to (0,0,0) for a better view)
- Customers can add image/text to only one layer in 3D graphic file.
- Multishipping is not supported
- Reorder is not supported.

Installation Requirements

- Magento 2.4.X

Installation Steps

To install the 3D Product Designer module, follow the steps below.

1. Download the module.
2. Access your web server directories and unzip and upload the content of the zip file to app/code directory.
3. Run the below commands on terminal
 - `php bin/magento setup:di:compile`
 - `php bin/magento setup:upgrade`
 - `php bin/magento setup:static-content:deploy -f`
 - `php bin/magento cache:clean`

Supported Languages

English, German, Italian

Change Log / Release Notes
